This clone is available from RZPD;

Contact RZPD (customer.service@rzpd.de) for further information.

Contact RZPD (customer.service@rzpd.de) for forther information.

Clone name at Harvard institute of Proteomics

(www.hip.harvard.edu): FLH13015.01.

This CDS clone is part of a collection of human full ORF clones jointly setablished and verified by the Harvard Institute of Proteomics (HIP) and RZPD.

This CDS has been inserted into pDONR2D! via a BP Clonase(TM)

The CDS has been inserted into pDONR2D! via a BP Clonase(TM)

reaction. Additional sequence has been added in front of the start codon: att. AAAAAA GCA GC TCC ACC (ATG).

The last codon is followed by the 3' att site: GACCCAGCTTTCTT. att

The clone is validated by full sequence check.

Compared to the reference sequence NM_006835 (GI:17738314) we found AA exchange(s) at position (first base of changed triplet):

223(arg->gly, 409(lys->arg)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SerProSerGlnArgAspGluValIleGlnTrpLeuAlaLysLeuLysTyrGlnPheAsn 60
                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               13662: contig of 13662 bp in length

CyClin D3-like protein - Arabidopsis thaliana
N;Alternate names: protein F3A4.150
C;Species: Arabidopsis thaliana (mouse-ear cress)
R;Bargues, M.; Collado, M.C.; Navarro, P.; Terol, J.; Perez-Alonso, M.; Mewes, H.W.; May submitted to the Protein Sequence Database, December 1999
A;Reference number: Z3307
A;Actus: preliminary
A;Molecule type: DNA
A;Residues: 1-561 cBRR>
A;Roperimental source: cultivar Columbia; BAC clone F3A4
C;Genetics:
A;Anterns: 157/3; 225/1; 268/3
A;Note: F3A4.150
                                                                         Cyclin E - zebra fish

hypothetical protein R02F2.1 - Caenorhabditis elegans
C;Species: Caenorhabditis elegans
C;Species: Caenorhabditis elegans
C;Date: 20-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 20-Sep-1999
C;Accession: T16660
R;Pauley, A.
submitted to the EMBL Data Library, May 1994
A;Description: The sequence of C. elegans cosmid R02F2.
A;Reference number: Z1855
A;Accession: T16660
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Retaus: preliminary; translated from GB/EMBL/DDBJ
A;Retaus: preliminary;
A;Molecule type: DNA

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      à
                                                              ð
                                                                                                                                                                                                                                                                                                    This sequence is the human Cyclin I nucleotide sequence. Cyclin I is expressed at almost constant levels throughout the cell cycle, and is implicated in controlling cell cycle progression and transcriptional control. Cyclins form complexes with cyclin-dependent kinases. CDK2, cyclin-dependent kinase 2, is used in the invention which relates to complexes of the CDK2 protein with other proteins, selected from cyclin cyclin seed to carry in S phase of the cill cycle, and is pivotal for GI/S transition. Compositions containing a CDK2 complex, an antibody targeting the complex, and nucleotide sequences encoding CDK2 or its derivatives can be used therapeutically. The complexes and their nucleotide sequences can be used therapeutically. The complexes and their nucleotide sequences can be used to treat diseases or disorders associated with increased or decreased levels of the complex. Screening the complex, or a derivative correct with the complex for neoplastic activity by measuring the survival or proliferation of cells from a malignant cell line when in context with the complex can be used to indicate if the the complex has anti-neoplastic activity. Screening for molecules that modulate the complexes can be used for treating or preventing context with the complexes can be used for treating or preventing corrested or atherosclerosis or atherosclerosis associated disease by contacting cort using a test animal, in which tumour growth or regression is measured to test whether anti-neoplastic activity is displayed. Diseases which can be treated or prevented by molecules which modulate the function of the complex include cancer, hyperproliferative disorders and atherosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LysAlaHisProLysTyrLeuSerCysIleAlaIleSerCysPhePheLeuAlaAlaLys 100
